

Moushuf Pradhan

+977-9804928037 | moushuf.pradhan@gmail.com | Kathmandu, Bagmati Province

Summary

AI-augmented Frontend Developer with more than a decade of experience leading frontend teams, building scalable, high-performance web applications using React.js, Next.js, TypeScript, and modern JavaScript ecosystems. Led frontend development for AI-driven enterprise platforms, reducing app build sizes by 77% and improving load times by 57% through advanced optimisations like tree-shaking and micro frontend architecture. Designed and implemented a custom React application architecture/design pattern system to improve scalability, maintainability, and development consistency across projects. Guided cross-functional teams, mentored junior developers, and implemented modular, maintainable codebases. Passionate about staying updated with emerging trends and technologies in frontend development to drive continuous improvement and innovation.

Skills

Micro Front-End, Module Federation, Frontend Architecture, Nx Monorepo, Modular Architecture, Performance Optimization, Core Web Vitals, Tree-Shaking, Code Splitting, Lazy Loading, React.js, TypeScript, Next.js, GraphQL, Node.js, React Native, Vite, Rspack, Webpack, Protobuf, Mobx-State-Tree/Redux/Recoil, Express.js, Team Leadership, Mentoring, Code Review, Clean Code, Custom NPM Package, Storybook.js, Lighthouse, Chrome DevTools, Vitest/Jest, Agile/Scrum, Git, npm/yarn, ESLint, Prettier, shadcn/ui, MUI, AntD, Emotion, MongoDB, MySQL, Firebase, HTML5, SASS/LESS, jQuery

Experience

Archisys Innovations & Developers Pvt. Ltd Frontend Tech Lead | 09/2025 - 02/2026

- Managed a frontend team of 5 junior and mid-level engineers, overseeing task allocation, code reviews, and team collaboration to maintain high code quality.
- Conducted regular knowledge-sharing sessions with the team, covering modern frontend tooling, build optimization techniques, and architectural patterns to upskill junior and mid-level engineers.
- Applied a custom modular architecture pattern in React applications, improving code maintainability and scalability across the codebase.
- Used GraphQL to efficiently fetch and manage data, improving API flexibility and reducing over-fetching.
- Used Jira for sprint tracking, task management, and team coordination within an Agile/Scrum workflow.
- Used shadcn UI components to build consistent, accessible, and reusable frontend interfaces.
- Chose Emotion CSS-in-JS for styling to enable flexible and maintainable styling while avoiding dependency on utility-first frameworks like Tailwind for long-term maintainability.
- Implemented an Nx monorepo, leveraging its built-in micro frontend architecture support to enable scalable, maintainable, and independently deployable frontend modules

Treeleaf Technologies Pvt. Ltd. | Lalitpur, Bagmati Software Engineer IV | 12/2022 - 11/2025

July 2024 - Nov 2025

Led frontend development for a large-scale US based, AI-driven enterprise platform, collaborating with a 40+ member team to create optimized, scalable applications with advanced AI features.

- Leveraged Protobuf technology for optimized, high-speed data transfer, enhancing application performance
- Optimized custom Protobuf JS package by enabling tree-shaking (migrated from CommonJS to ES Module), reducing consumer apps bundle size by an average of 27.6%
- Conducted performance and memory profiling using Lighthouse and Chrome DevTools, identifying and resolving bottlenecks for improved efficiency
- Performed network and CPU throttling in Chrome DevTools to evaluate efficiency, page speed, and user experience across diverse conditions
- Reduced front-end app build sizes by 77.25% (e.g., from 21.1 MB to 4.8 MB) through dependency optimization (-27.6%), asset compression, file minification, and build configuration tuning (-47.1%)
- Improved load times by 57.1%, optimizing Core Web Vitals (e.g., LCP by 58.43%) and browser metrics (e.g., DOMContentLoaded from 1.23s to 416ms, -66.26%; Load from 1.50s to 623ms, -58.47%) via lazy loading and code

splitting

- Decreased memory usage by 82.24% (heap size from 107 MB to 19 MB) through targeted optimizations
- Designed a modular design pattern, limiting components to 50-80 lines with separated UI, logic, utilities, and styles for enhanced code quality
- Implemented micro frontend architecture with build-time and run-time integration (Module Federation, custom packages, iframes) for balanced, optimized page load times
- Researched modern build tools like Rspack to improve development experience and build performance
- Evaluated Module Federation in Webpack, Vite, and Rspack, resolving compatibility issues to streamline micro frontend adoption

Dec 2022 - July 2024

Developed and maintained multiple sub-modular applications of a Mexican-based B2B e-commerce platform ecosystem

- Employed React.js alongside the most popular libraries within the entire React ecosystem, ensuring the use of industry-standard tools and maximum development efficiency
- Implemented Next.js in one of the applications to leverage its server-side rendering capabilities and streamlined routing, enhancing performance and improving the overall user experience
- Integrated TypeScript for enhanced type safety and productivity, promoting code-quality and code-reliability
- Actively participated in developing and maintaining a custom UI components library (NPM package), ensuring consistency across projects
- Utilized Storybook.js for UI components development, facilitating isolated component testing, their documentation and promoting reusability across projects
- Leveraged the Jest and the Vitest frameworks to validate the behavior of UI components, ensuring software reliability and seamless integration
- Utilized Static analysis tools such as ESLint for linting and Prettier for code formatting for JavaScript, ensuring code consistency and adherence to best practices
- Integrated Husky pre-commit and pre-push hooks for automated code checks and tests, ensuring code quality and consistency throughout the projects
- Built an Admin tool solely using React.js at the Frontend, Node.js (Express.js) at the Backend and MySQL as a DBMS
- Led frontend development, defining architecture, structuring files, establishing coding conventions, and ensuring scalable, maintainable application structure
- As a team, experimented with different dependencies to assess their effectiveness and identify optimal solutions for ongoing use
- Collaborated with designers to implement responsive web designs, optimizing user experience across various screen sizes and devices
- Solely managed and sustained multiple frontend projects amidst a significant reduction in team size (at one point of time), ensuring project continuity and timely delivery despite the sudden resource constraints
- Conducted code reviews and provided constructive feedback to team members, fostering a culture of continuous learning and improvement
- Enhance application loading times and overall performance, resulting in improved user satisfaction and retention
- Participated in cross-functional Agile/Scrum ceremonies such as sprint planning, daily stand-ups, and retrospectives, fostering collaboration and transparency within the team
- Acted as a mentor for junior developers, providing guidance on best practices, code quality, and career development, contributing to the growth and success of the team

Sajilo Khoj Pvt. Ltd. | Bhadrapur, Province 1

Sr. Front-End/React Developer | 02/2022 - 09/2022

Built the Front-End of a banking software from scratch, for a popular FinTech company. The project was aimed to replace their existing desktop application, being used by hundreds of co-operatives across Nepal.

- Co-ordinated with development team to discuss user interface ideas and applications
- Reviewed application requirements and interface designs
- Translated wire-frames and designs into good quality code
- Wrote application interface code using JavaScript following React.js workflows
- Leveraged the inbuilt React toolkit for creating front-end features
- Developed and implemented front-end architectures to support user interface concepts
- Designed REST calls using React to streamline user interface performances
- Optimized components to work seamlessly across different browsers and devices
- Developed responsive web-based UI
- Enhanced application performances with constant monitoring
- Efficiently collaborated with global teams across various time zones, coordinating communication during agreed-upon times to ensure smooth project progression and goal achievement.

- Worked with delivery team to ensure overall quality of the experience and support this with tests and documentation

Residelly | Brussels, Belgium**Front-End/React Developer | 07/2020 - 01/2022**

A real-state property management platform aiming to reduce complexity by offering multiple properties and tenants management features including location maps and documents and files storage.

Prosely | Brussels, Belgium**Co-Founder | 05/2020 - 01/2022**

A versatile tool to help songwriters get organized in their creative songwriting process.

AppDiscovery Lab Pvt. Ltd. | Madhyapur Thimi, Bagmati Province**Front-End/Junior React Developer | 07/2018 - 03/2020****Clipping Beast Pvt. Ltd. | Jadibuti, Kathmandu, Bagmati****Front End Developer | 04/2017 - 05/2018****Crystal Infosys Pvt. Ltd | Jadibuti, Kathmandu, Bagmati****Front End Developer | 05/2014 - 03/2017****Education**

International School of Management and Technology | Kathmandu, Bagmati Province**Tinkune | 10/2023****BSc (Hons) Computer Systems Engineering (BSc. IT) | University of Sunderland**
